 - 7.1 Score Results

Assessment Summary

This report has been prepared for NETOSU Token on the Ethereum network. AnalytixAudit provides both client-centered and user-centered examination of the smart contracts and their current status when applicable. This report represents the security assessment made to find issues and vulnerabilities on the source code along with the current liquidity and token holder statistics of the protocol.

A comprehensive examination has been performed, utilizing Cross Referencing, Static Analysis, In-House Security Tools, and line-by-line Manual Review.

The auditing process pays special attention to the following considerations:

- Testing the smart contracts against both common and uncommon attack vectors.
- Inspecting liquidity and holders statistics to inform the current status to both users and client when applicable.
- Assessing the codebase to ensure compliance with current best practices and industry standards.
- Verifying contract functions that allow trusted and/or untrusted actors to mint, lock, pause, and transfer assets.
- Cross referencing contract structure and implementation against similar smart contracts produced by industry leaders

Project Overview

Token Summary

Parameter	Result
Address	0x13BEDf421376040E3567bd9462AA900FDf9115AC
Name	NETOSU
Token Tracker	NETOSU (\$NETOSU)
Decimals	18
Supply	1000000000
Platform	Ethereum
compiler	v0.8.0+commit.c7dfd78e
Contract Name	NETOSU
Optimization	No
LicenseType	MIT
Language	Solidity
Codebase	https://etherscan.io/token/0x13BEDf421376040E3567bd94 62AA900FDf9115AC#code
Payment Tx	Corporate

Simulation Summary

Parameter	Result
Transfer From Owner	Pass
Transfer From Holder	Pass
Add Liquidity	Pass
RemoveLiquidity	Pass
Buy from Owner	Pass
Buy from Holder	Pass
Sale from Owner	Pass
Sale from Holder	Pass
Remove Liquidity	Pass
SwapAndLiquify	Pass
SwapAndSale w/Fee	Pass
SwapAndSale TX	
SwapAndSaleNoFee	Pass
SwapAndSale No/Fee TX	
ExcludeFromFees	Pass

Website

AUDIT		
Parameter	Result	9
Pool Creation	Pass	
Pool Creation TX		
Pool Finalize	Pass	
Pool Finalize TX		
Enable	Pass

Project Owner Notes:

NETOSU - KYC Verification

This KYC page verifies that the project has successfully completed the verification process at Pinksale. Project info:

- Project Name: NETOSU
- Project Website: https://netosu.com/
- KYC Issued: September 21, 2024
- People Verified: 2

Smart Contract Vulnerability Checks

The Smart Contract Weakness Classification Registry (SWC Registry) is an implementation of the weakness classification scheme proposed in EIP-1470. It is loosely aligned to the terminologies and structure used in the Common Weakness Enumeration (CWE) while overlaying a wide range of weakness variants that are specific to smart contracts.

IDSeverityNameFileSWC-100PassFunction Default Visibility\$NETOSU.scSWC-101PassInteger Overflow and Underflow.\$NETOSU.scSWC-102PassOutdated Compiler Version file.\$NETOSU.scSWC-103PassA floating pragma is set.\$NETOSU.scSWC-104PassUnchecked Call Return Value.\$NETOSU.sc	weakness variants that are specific to smart contracts.

SWC-136	Pass	Unencrypted Private Data On-NETOSUn.	\$NETOSU.sol	L: 0 C: 0

We scan the contract for additional security issues using MYTHX and industry-standard security scanning tools.

Inheritance

The contract for NETOSU has the following

inheritance structure.
The Project has a Total Supply
of 10,000,000,000

Smart Contract Advance Checks

Technical Findings Summary

Classification of Risk

Severity	Description	
Critical	Risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks.	
Major	Risks can include centralization issues and logical errors. Under specific circumstances, these major risks can lead to loss of funds and/or control of the project.	
Medium	Risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform	
Minor	Risks can be any of the above but on a smaller scale. They generally do not compromise the overall integrity of the Project, but they may be less efficient than other solutions.	
Informational	Errors are often recommended to improve the code's style or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code.	

Findings

Assessment Results

Score Results

Review	Score
Overall Score	98/100
Auditor Score	97/100
Review by Section	Score
Manual Scan Score	53 /53
SWC Scan Score	37/37
Advance Check Score	19 /19

The Following Score System Has been Added to this page to help understand the value of the audit, the maximun score is 100, however to attain that value the project most pass and provide all the data needed for the assessment. Our Passing Score has been changed to 80 Points, if a project does not attain 80% is an automatic failure. Read our notes and final assessment below.

Audit Passed

Important Notes:

- No risky code was found in the source codes
- Always DYOR on the project itself.

Auditor Score = 97 Audit Passed

Audit Passed Current project reviewed successfully passed audit, meeting all requirements for approval per Analytix Audit guidelines. ©FreddyCryptos Founder & CEO Today's Date Dubai - United Arab Emirates

Appendix

Finding Categories

Centralization / Privilege

Centralization / Privilege findings refer to either feature logic or implementation of components that actagainst the nature of decentralization, such as explicit ownership or specialized access roles incombination with a mechanism to relocate funds.

Gas Optimization

Gas Optimization findings do not affect the functionality of the code but generate different, more optimalEVM opcodes resulting in a reduction on the total gas cost of a transaction.

Logical Issue

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion on howblock.timestamp works.

Control Flow

Control Flow findings concern the access control imposed on functions, such as owneronly functionsbeing invoke-able by anyone under certain circumstances.

Volatile Code

Volatile Code findings refer to segments of code that behave unexpectedly on certain edge cases that mayresult in a vulnerability.

Coding Style

Coding Style findings usually do not affect the generated byte-code but rather comment on how to makethe codebase more legible and, as a result, easily maintainable.

Inconsistency

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setterfunction.

Coding Best Practices

BRC 20 Conding Standards are a set of rules that each developer should follow to ensure the code meet a set of creterias and is readable by all the developers.

Disclaimer

AnalytixAudit has conducted an independent security assessment to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the reviewed code for the scope of this assessment. This report does not constitute agreement, acceptance, or advocation for the Project, and users relying on this report should not consider this as having any merit for financial advice in any shape, form, or nature. The contracts audited do not account for any economic developments that the Project in question may pursue, and the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude, and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are entirely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence, regardless of the findings presented. Information is provided 'as is, and AnalytixAudit is under no covenant to audited completeness, accuracy, or solidity of the contracts. In no event will AnalytixAudit or its partners, employees, agents, or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions or actions with regards to the information provided in this audit report.

The assessment services provided by AnalytixAudit are subject to dependencies and are under continuing development. You agree that your access or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies with high levels of technical risk and uncertainty. The assessment reports could include false positives, negatives, and unpredictable results. The services may access, and depend upon, multiple layers of third parties.
